With extensive expertise in a wide array of military technologies and over twenty years experience in design and manufacture of defense electronics, Elbit is applying its know-how to a comprehensive product line geared specifically for the security and paramilitary market.

Elbit's Total Security concept includes solutions ranging from basic systems to multi-sensor systems; from doctrines and equipment to support and maintenance.

Total Security networks offer law enforcement and elite security teams all-encompassing answers to diverse and growing threats. After listening to customer input, Elbit can customize a Total Security System keeping pace with today's advanced technologies and tomorrow's mounting threats.

Elbit's Total Security Systems comprise:

- Sensor-based Observation and Identification Systems
- Communication Systems
- Command and Control Centers
- Equipment for Force Intervention

Key Features and Advantages

- Multi-sensor security systems enable remote and on-border detection, identification, situation assessment, and interception of potential incursions.
- All Elbit systems are backed by company Integrated Logistics support (ILS) which includes training, documentation, field services and post-production support.

System Applications

- Border Surveillance and Control
- High-risk Installations
- Airports
- Seaports
- Military Bases
- Oil Refineries
- Power Plants
- Anti-Terror Teams
- Anti-Smuggling Squads
